

Think Of A Number!

The Magic Of Binary Trees

As you 'walk round' your binary tree, make a note in the 'Met Once' column when you visit a number for the first time. So 54 will be the first number met once. Keep walking.... When you meet the number for the second time, add it to the right hand list in the first available space (from the top). If you meet the number a third time, you can ignore it.
